

LORD Corporation uses iBOLT to integrate its SAP R3 and SAP Business One applications

"iBOLT proved to be the best option to link our business operations in one easy-to-use, single utility tool, which we can continue to scale up as our organization grows."

Carney Vensel,
Director International IT,
LORD Corporation

Customer

LORD Corporation is a privately-held company that specializes in vibration, shock and motion control devices, magnetically responsive technologies and specially formulated adhesives and coatings. With manufacturing in nine countries and offices in more than 15 major business centres, LORD Corporation employs more than 2,400 people worldwide and has sales in excess of \$630 million.

Challenge

LORD Corporation was already using the R3 ERP system from SAP to manage its domestic operations. It soon realized that this system was too large for the needs of its globally located local subsidiaries. On acquiring SAP's Business One for small-to-medium sized companies, the challenge then became how to link the two systems to provide fluid business operations across the whole organization.

Solution

IMG Europe used Magic Software's iBOLT business and process integration suite to seamlessly **integrate SAP's Business One with the existing SAP R3 system** in operation across the organization. iBOLT is able to receive R3 files from customers and business partners, captures the relevant data, and then update Business One with that data as needed. iBOLT also handles all outgoing SAP R3 transactions.

Value

iBOLT **has streamlined** LORD Corporation's business processes, **saving time and reducing the instances of manual processing errors**. In addition, the new system has **opened up a host of integration possibilities** including Master Data integration, involving classifying data for global reporting and market segmentation.
