

iView

Business Intelligence for SAP Business One

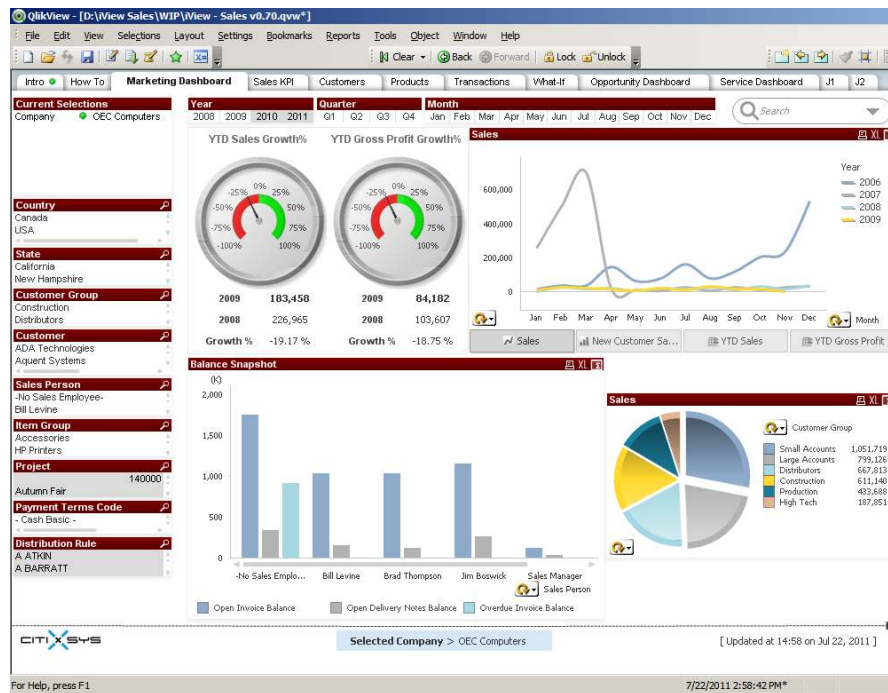

iView – Business Intelligence for SAP Business One

iView is a Business Intelligence (BI) platform that provides Dashboards and Analytics to users of SAP Business One. Business Intelligence (BI) is a kind of business software solution designed to use gathered data more effectively and transform it into beneficial information that can be employed to increase company's competitiveness and visibility on a market.

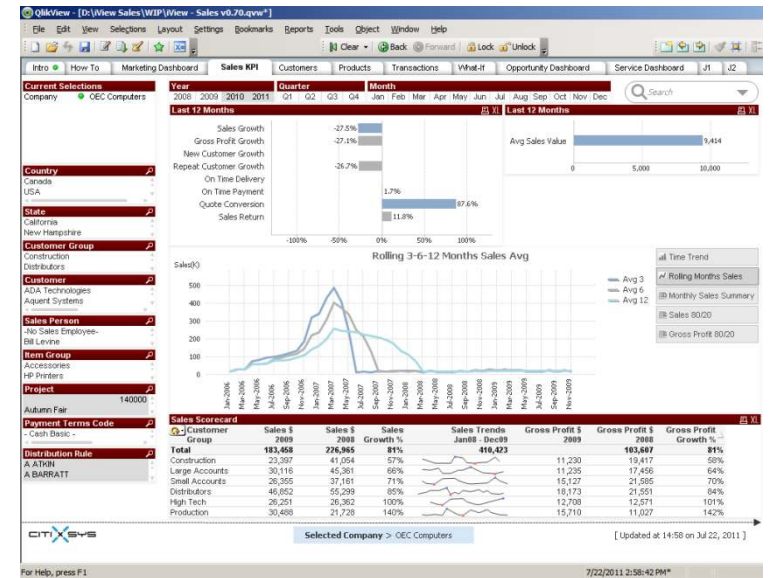

With Business Intelligence software you can obtain an unambiguous view on corporate data and perform data analysis, helping your company uncover relationships and patterns present in data collected so far.

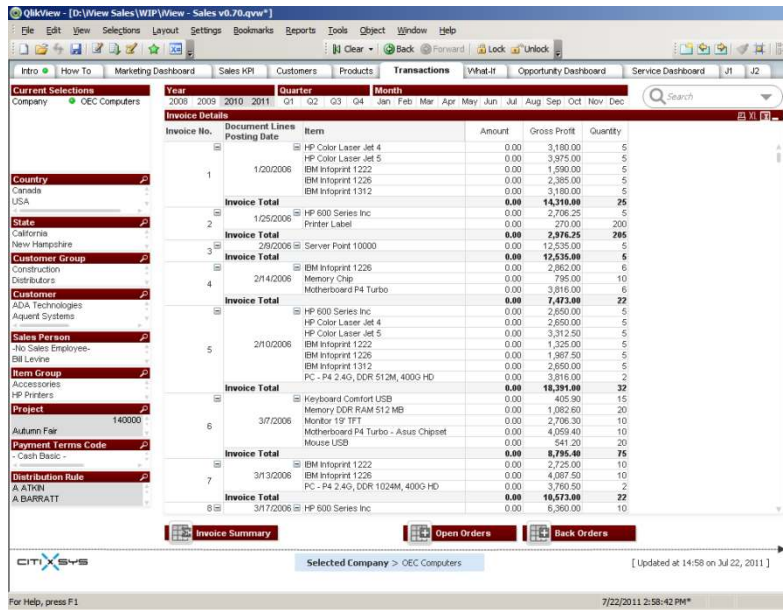

Business Intelligence is a process that works for any size company to support data-based managing, and fact-based decision making for successful performance on a crowded marketplace.

The BI approach works so well because it integrates business process perspective and customer perspective, and provides a way to quantify all the value drivers, not only the financial ones.

iView – Business Intelligence for Business One from CitiXsys Technologies utilizes cutting edge technology and offers intuitive dashboards across business functions of SAP Business One. iView converts data into meaningful and actionable information. It makes a business more competitive by enabling informed decision making well in time.

Reports and dashboards are published in a standard browser eg Internet Explorer or Firefox, over the internet or within an organization's intranet using a zero foot print Ajax client.

With associative search technology and in-memory processing, iView gives an experience similar to Google's instant search. While associative search provides instant results as you type, its intuitive interface highlights important relationships in your data. Associative search is extended into every list box across every dashboard, enabling users to search indirectly and quickly find detailed answers to critical questions.

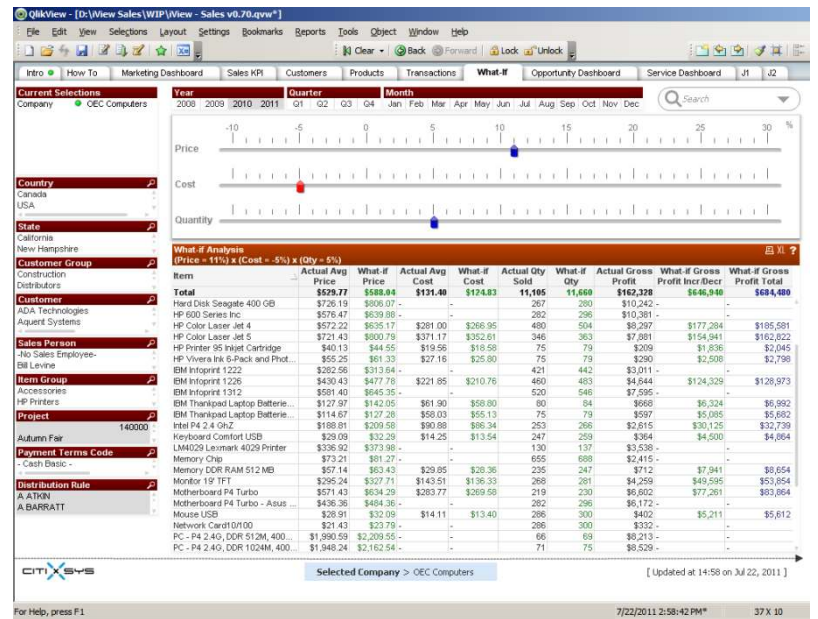

iView dashboards and reports can be viewed on mobile devices such as iPad/iPhone or Android based mobile devices offering unprecedented freedom from the desktop with dynamic, interactive data analysis when and where you need it.

iView – Business Intelligence for Business One has been developed keeping in mind the business user. The application comes with ready to use dashboards for:

- Sales Analysis
- Purchase and Inventory Management
- Executive Dashboard
- Retail Sales Analysis

These ready to use dashboards integrate seamlessly with SAP Business One and iVend Retail, dramatically reducing the effort required to start using them.

These existing dashboards can be customized as per requirements and additional dashboards can be created for specific customer needs and scenarios.
